Course Description:

The aim of this course is to familiarize the students with both, quantitative and qualitative methodologies used for scholarly inquiry relevant for political science. The course will begin with an overview of theories of knowledge, or how do we know what we know. Next, emphasis will be placed on how we are able to acquire such knowledge, as well as how best to communicate this knowledge. In practical terms, students will be asked to uncover their topic(s) of research interests relevant for political science, conduct a literature review, choose appropriate methodologies to conduct this research, and finally communicate their research agendas in the form of a research proposal, or, alternately, a grant proposal.

Learning Outcomes:

Gain insights into the value of self-reflection as related to conducting research and knowledge generation.

Understand the differences between quantitative, qualitative, and mixed research methods.

Differentiate between different methods used within the three different genre of research methodologies.

Understand the connection between research questions and reserach design.

Gain valuable practical experience writing a literature review and composing a resarch proposal.
