Disclaimer: Information in the brief course outline is subject to change. The syllabus posted on OWL Brightspace is the official and authoritative source of information for the course.

Course Description:

Topics include: fundamentals of operating microcomputers, use of statistical packages (e.g., SPSS/PC+), interpretation of computer output from univariate and multivariate statistical analyses.

Learning Outcomes: one outcome per entry

Determine the appropriate statistical test for various types of data in psychology

Conduct a variety of statistical tests using computer software

Write an APA-style results section reporting the outcomes of common statistical tests

Design and conduct an empirical research study

Textbooks and Course Materials:

The texts are here to support your understanding of the different analyses we will cover with additional information, should you need it. Some people will find them helpful and others less so. Important concepts will be covered in lectures and labs, so I consider these texts secondary to our in-class work. As such, there are NO REQUIRED textbooks or other in-course material costs for this course.

You will need to download the statistical software packages for the course: SPSS & JASP. SPSS can be bought or accessed for free via MyVlab at UWO. JASP is free to download.

SPSS

The text is available at the university bookstore. If you do not wish to buy the text, it is available at the library as an e-book. This text is highly recommended for anyone who likes a funny stats book (yes, really) and who may be a bit nervous about stats or feel they would like additional background on the analyses we will cover. Also, students who plan to go on to graduate school of any kind are encouraged to own a copy. The text is also available for purchase from online sellers such as amazon.ca and chapters.ca.
